## Basic Branding Instructions

This is the initial screen for Page Brand Generator. To brand a page simply click on File – Open – then select the tagged file or drag the file from within Windows Explorer directly into the right window column.

Simply fill in the values for each tag and hit the 'Brand' button.

Then hit the 'Save As...' button to save the new file to your hard drive.

## Basic Tag Information

Using the tags in page brand generator is extremely simple. The program searches within the file for anything with %%Tag%%. You can use any tag name you wish. Simply put %%Your Text Here%% for a tag name of 'Your Text Here'. To add default values to the form fields add a # after the tag name and put your default text or value.

For example if you want to add a 'Your Full Name' field simply use %%Your Full Name#John Doe%% where John Doe will be the default text in the form field when you open the tagged page in 'Page Brand Generator'.

### **Brief Description of Functions**

**File Menu – Update:-** This will open a new browser window where the latest version of 'Page Brand Generator' will be available.

**Update Button:-** If any new tags are created in the right column simply click the update button and the software will update the tag fields on the left.

**Copy to Clipboard Button:-** Whatever text is selected when this button is pressed will be copied to the windows clipboard function. A quick way to use the new branded text, instead of saving it as a new page.

**Brand Button:-** When this button is pressed all field values in the left column will replace the appropriate tags in the right button.

**Save As... Button:-** When the page is branded use this button to save the page in a new location and/or a different page.
